Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of - Web : www.genoscope.cns.fr)
 Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm. the library in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP 573 taatcggtaacattagactttcaaaatcattttaacccctaaacagtaaatttgaagga 632 813 ctacacattgaccattgaaaagttcgttctcccatgggtaaccagatcaaactcacatcc 872 819 WATWTATWTATTTATWTWTWTTWTATTWTATWTATWWWTWWATWWWTAWAAWTATAT 760 873 aaacataacatggatatctccttaccaatcatactaattattttgggttaaatattaatc 932 879 TITITWITATWATATWATATTAWATTTTTWITWIATTWWIATAWWATWWIATWITT 820 699 ITITITITITIMAATITIMAATITIAATITAMWWAAIWAWITATITIAATAAWIAATITAAAT 640 The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. - Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information. please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC ilbrary was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer institute in Buffalo, NY. The library is named RPCI-99 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä

**Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            part of a

please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazucyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EOSI dipsestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; no w sp. the same strain used for the BDGP's PI and ESI libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequencage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              153 ttaatttattagttttattagaaatattaattagaaaattttgaatccccgatttctcct 212

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or fillters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fullfly.org The BDGP Drosophila melanogaster BAC Ilbrary was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoxI digestion of Drosophila DNA provided by the BDGP from the 1sogenic strain v2: on bw spp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gooegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-99 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2: on bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr

The library is named RPCI-98 and was constructed by patrial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain of Drosophila DNA provided by the BDGP from the 191 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or fillters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP)-http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre C'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Direct Submission

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre Ordect Grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

protein can be used in the treatment or prevention of symptoms of a malaria parasite infection. The polypeptides can inhibit, block or reverse the sequestration of erythrocytes in patients suffering from malaria. Nucleic acids derived from the PfEMP1 gene can be used as probes and primers to identify a plasmodium falciparum parasite, the primers used to generate characteristic amplification patterns from different practice which the PfEMP1 polypeptide or its fragments may be used in diagnosis of malaria infection. This sequence encodes the PfEMP1 protein of the MC type of Plasmodium falciparum. An
                                                                                                                                                                                                                                                                                                                                                                                                                                                   PfEMP1 protein of the MC type of Plasmodium falciparum. An alternative, truncated version of the coding sequence (a cDNA clone)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Include secretory signal sequences that are native or foreign to blactosurer, Fig 13A-13B; Sopp; English.

The sequence represents the A. nidulans ANS-1 sequence which is included in the construction of transformation vectors for recombinant protein expression and secretion from a filamentous fungus host. The sequence increases the transformation efficiency of the vector. This illustrates the main claims of the patent, which provide a vector containing (1) DNA encoding a heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vectors and DNA for expressing polypeptide(s) in filamentous fungi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ttattagaaatattaaattagaaaattttgaatccccgatttctcctccttttcttcgcta

X20248 to X20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs, to a family of motile, spiral-shaped bacteria called Spirochetes. Spirochetess are pathogenic in humans and Borrelia causes epidemic and

On open reading frame of 2349 bps extends from the 5' terminal end of the insert to a "TAA" stop codon. It is longest ORF found in the sequence.

Sequence displays some of the characteristics of other malaria nucleic acid sequence s: tandemly repeated motifs, high AT content and a cortesponding preference for codons containing these bases, and a high content of codons for glutamate. Three major repetitive sequences are:

Content of codons for glutamate. Three major sequences are:

Content of codons for putamate. Three major repetitive sequences are:

Content of codons for putamate. Three major pass to bp 411; another motif from bp 34 to bp 151 is repeated from bp 289 to bp 411; another motif from bp 567 to bp 611; a third motif from bp 1174 to bp 1233 is repeated tandemly 11 times. This last repetitious region consists of 360bp repeate differing only in 3 bases GAT coding for aspartate. This region is flanked to the 5' terminal od a degenerated 60 bp repeat. GC content coding part of the insert is on average 30%, and of the non-coding

DNA encoding SERA antigen of Plasmodium falciparum -
also DNA encoding signal and regulatory sequences of SERA gene,
for diagnosis, prevention and treatment of malaria.

Disclosure: p: English.
Sequence allows for production of antigenic malarial proteins, useful in
diagnosis, prevention and treatment of the disease. The sequence may be
used in an expression vector, and signal and regulatory sequences may be
used to stimulate production of other products.
Sequence 6124 BP; 2567.A; 602 C; 801 G; 2137 T; 17 Others;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1484 TCTGATAATTCAAATGGATATAATAAATTAATTTTTTTTAACTCCTAGAAATATTTAAT 1543

This list the nucleotide sequence of one strand of the PSI-PL470 gene of the 30.7 kb extrachromosomal plastid of Plasmodium berghel. This plastid encodes organelle-like rRNAS, tRNAS, tIbosomal proteins and RNA polymerase subunits, amongst others. Plasmodium is detected in a human or animal sample by treating it, or derived cortected in a human or animal sample by treating it, or derived cortected in a human or animal sample by treating it, or derived cortected in a human or animal sample by treating it, or derived cortected acid, (A) and detecting any hybridisation. (A) can include the PSI-PL470, PLH-PPH, PRB or PWO gene, the mitochondrial cort gene, and nucleic acids derived from them. Also new are to cort gene, and nucleic acids derived from them. Also new are used to diagnose Plasmodium infection. Also (not claimed) the polypeptides encoded by (A) are useful as targets for drug development and for development (A) from different species allows development of genus or species specific assays that result in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1022

Claim 1; Page 12-14; 17pp; German.

Jycophorin binding protein 130h is a P.falciparum blood stage antigen 69% homologous with the known GBP130. The GBP130h gene and its homologues can be used in vaccines to protect against malaria caused by P.falciparum. The coding sequence was isolated using PCR techniques on a genomic P.falciparum FCBR strain library. The GBP130h gene was found to be highly conserved between different strains but is distinct from the GBP130 gene.
                                                                                                                                          886 atatctccttaccaatcatactaattattttgggttaaatattaatcattatttttaaga

A DNA sequence coding for a heterologous polypeptide which can be expressed in and secreted from filamentous fungi is claimed. Pref the DNA sequence codes for bovine preprochymosin, M. meihel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        preprocarboxyl protease or A. niger preproglucoamylase. Also new are vectors consisting of the DNA sequence plus an operally-linked signal sequence. The vectors may also include a sequence which increases transformation efficiency, e.g. ANS-1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The inventors claim a novel DNA molecule which comprises a nucleotide sequence corresp. to all or a portion of the base sequence coding RESA (N60472) or FIRA (N60473). RESA and FIRA have antigenicity suitable for providing protective immunity against blasmodium falciparum malarial infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24-AUG:1991 (first entry) Sequence encoding the ring-infected Erythrocyte Surface Antigen

22-NOV-1992 (first entry)
Sequence encoding the Histidine-rich protein (HisRP) associated with
the knob (K+) phenotype.
Malaria vaccine: Histidine-rich protein; cytoadherence; ss.

RESULT 15 025273/c ID 025273 standard; cDNA; 2104 BP.

Location/Qualifiers

Plasmodium lophurae.

```
This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to This sequence represents the var-7 gene of Plasmodium. Var-7 belongs to This sequence represents the var-7 genes which have homology to the Duffy antiquen binding like (DBL) family of genes which have homology to the Duffy antiquen binding protein (DABB) and stalic acid binding protein (DABB) and T72888 respectively). The var family of genes modulate cytoadherence and antiquence variation of Plasmodium infected erythrocytes. SABP and the Duffy antiquen binding protein (DABP) are solubbe proteins that appear in the culture protein (DABP) are solubbe proteins that appear in the culture supernatant after infected erythrocytes release merozoites. DABP and SABP mediate the binding of merozoites and schizonts to the erythrocyte surface. These proteins are necessary for erythrocyte invasion by the parasite. This sequence can be used in the compositions of the invention. The compositions are for the treatment and prevention of malaria, and comprise either a nuclectide sequence or encoded polypeptide of the var-1, var-2, var-3 or var-7 genes of the DBL gene family, a family of genes having homology with conserved regions of DABP and SABP. The compositions are used for the treatment and prevention of malaria. They are also used in the preparation of vaccines for inducing a protective immune response in a mammal to Plasmodium merozoites (especially

Two variants of HisRP are produced by P. falciparum. One is

Two variants of HisRP are produced by P. falciparum. One is

associated with what is referred to as "knobby phenotype" (K30) and

"knobless phenotype" (K-). The "knobby" and "knobless" phenotypes

have been implicated in cytoadherence, which is characteristic of

erythrocyte infection. It has now been found that CDNA expressing

both K+ and K- HisRP can be obtained by the use of P. lophurae HisRP

Histidine-rich protein associated with Plasmodium knob phenotype and DNA encoding it, used for in vitro diagnosis of $P.\,$

Falciparum infection
